

# PTTCONNECT

PTTconnect is the powerful **PTT-over-Cellular (PoC) solution** that turns your smartphone into a professional radio-style communication device. Secure communication with high audio quality and fast call set-up.

# FAST COMMUNICATION. SECURE.

PTTconnect from HMF enables fast team communication between workgroups with intuitive push-to-talk (PTT) functionality, promoting coordination and productivity.

## FEATURES

- » First-class, fast call setup and minimal speech delay
- » Outstanding audio quality
- » Industry-leading low IP bandwidth
- » Requires no investment in radio infrastructure, works with existing mobile radio networks
- » Fast voice communication (PTT, PoC)
- » Flexible radio connection via Wi-Fi® as well as 3G+/4G/5G networks

## STAY IN TOUCH

Extend your reach and overcome the limitations of your traditional wireless communications - with the tap of a finger. Use clear communications over mobile data networks as well as Wi-Fi® to increase the security and efficiency of your employees - even if your teams are spread across multiple work sites, offices, cities or even larger regions.

## FAST

PTTconnect offers premium, fast call set-up and low latency for your voice communications - even in mission-critical environments. In addition, voice delays are reduced to an absolute minimum and are not amplified by group size or network coverage.

## SECURE

Protecting the confidentiality and integrity of communications is an important aspect of the PTTconnect solution. Your communication benefits from encrypted VoIP data transmission as well as authentication.

## INTUITIVE

The solution is exceptionally easy to use - allowing mobile users to fully concentrate on their tasks. A clear, user-friendly design, a web-based interface for administration and, last but not least, the flexibility for different brands and models of Android™ devices let you get started quickly. Integration into existing IT systems is straightforward, especially in virtualised environments.

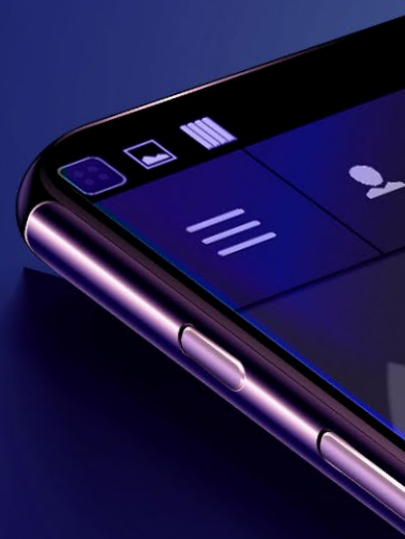

## CONNECTIVE

Public and private mobile networks as well as Wi-Fi® can be used for the flexible communication connections of your mobile workers. And through the equally reliable and powerful IP-based connection with the ACCESSNET®-T IP TETRA radio system from HMF, your voice and data communication can be seamlessly extended beyond the physical range of the PMR system.

## YOUR TERMINAL - YOUR CHOICE

You choose which devices you use for PTTconnect. Our solution can be used on Android™ smartphones from various manufacturers. In addition, you can also use Hytera PoC radios from the PNC series.
